

ecomen solar™

commercial solar solutions

ecomen solar™

The rising cost of electricity coupled with the continued environmental risks associated with coal, natural gas, and nuclear power plants are driving many business owners and facility managers to consider alternative energy solutions such as solar energy. Solar energy is rapidly becoming an important improvement project for many environmentally and economically savvy businesses, and with good reason.

the challenges of solar energy

Unfortunately, the installation of a commercial solar system can be a complex project. Selecting a suitable system location, filing the required permits, and selecting quality, compatible components are just the beginning of the process. A business owner or facility manager may need to directly manage multiple contractors and ensure that work is delivered in compliance with all applicable building codes. Lastly, receiving energy tax credits and incentives requires the completion of many complex government forms.

Some solar installers offer attractive solutions that include the promise of solar for little to no up-front cost. These programs often include contractual agreements under which the installer is entitled to ongoing maintenance costs as well as tax credits and incentives that would otherwise go to the benefit of the business or municipality. Often, these companies install systems on your facility with a "cookie-cutter" approach to solar - one where optimal energy harvesting and aesthetic design are secondary considerations to their profit.

the solution is ecomen solar

EcoMen Solar is different - our priority is ensuring that you receive the best solar installation for your facility. This process starts long before our first conversation. Through continuous education and rigorous product evaluations, the **EcoMen** team ensures that it remains at the forefront of commercial solar installation. We offer our customers the latest knowledge and products. We're about performance and integrity - high performance products and service without compromise or excuse.

commercial expertise

commercial comfort

- Office Buildings
- Restaurants
- Hotels
- Retail
- Residential Complexes
- Parking Structures

commercial solar solutions

the **ecomen** advantage

experience over 35 years of experience in the improvement industry making a "lifetime of friendship" with each client.

reliability quality system completion from individualized design and engineering all the way through to installation and grid connection.

performance measurably superior performance through the combination of industry-leading products and highly skilled tradesmen.

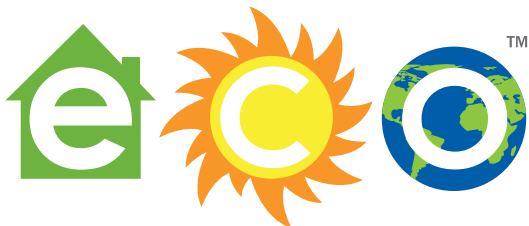

We at **EcoMen Solar** look forward to helping you achieve your renewable energy goals. Once you have experienced the **EcoMen Solar** advantage, you will understand why we have a "lifetime of friendship" with each client.

solar financial incentives

- Electric utility savings
- 30% federal tax credit
- Accelerated depreciation
- Solar Renewable Energy Certificates (SRECs)
- Exempt from sales tax and property tax

We work with leading solar equipment manufacturers to ensure that we use the highest quality solar products available, from the solar panels to the inverters. Equally important, we drive every step of the process – from design to engineering, from permits to installation, and ultimately, connection to the grid. This allows us to deliver customized solutions for your facility that optimize your energy harvest. The end result is measurably superior performance that is better for you and our environment.

Everybody talks about great service, but once you deal with **EcoMen Solar** you'll know what great service truly is. We have applied our 35 years of commercial improvement experience to creating service that matches the products we install. Nobody works harder or more diligently to make sure you get the solar solution that you need, backed by the service you deserve.
